1. Introduction

The **Budget Planner** is a simple web-based application designed to help users manage their monthly income, expenses, and spending habits. It provides an interactive interface for adding transactions, categorizing them, visualizing spending using charts, and tracking progress against a set budget limit.

2. Objectives

The main objectives of the project are:

- To create a basic interactive website using HTML, CSS, and JavaScript
- To understand data storage using **local Storage** in web browsers
- To display financial data using **Chart.js pie and bar charts**
- To help users organize income and expenses in different categories

3. Scope of the Project

- Adding income and expense transactions
- Categorizing each transaction
- Setting and editing a monthly budget limit
- Automatic monthly calculations (income, expense, balance)
- Pie chart for category-wise expenses
- Bar chart for comparing income vs expense
- Local storage support (data saved automatically)
- Option to add custom categories
- A daily financial tip box

4. Tools and Technologies used

Languages

- **HTML** – for creating the webpage structure
- **CSS** – for designing the layout and styling
- **JavaScript** – for interactive functionality such as adding transactions, updating charts, and handling local Storage

Software Used

- **VS Code** – code editor
- **Web browser (Chrome)** – for running and testing the project

5. Implementation

Add Transaction System

Users can add expense or income entries with category, date, amount, and description. Data is stored inside an array and saved to localStorage.

Dynamic Category System

The website comes with default categories (Food, Transport, Bills, etc.) and also allows users to add custom categories.

Monthly Tracking

The system detects the current month and shows only the matching transactions. Buttons allow moving to previous and next months.

Summary Section

Shows:

- Total income
- Total expenses
- Net balance

Budget Progress Bar

The user sets a budget limit.

A colored progress bar visually shows how much of the budget has been spent:

- **Green** <50%
- **Orange** 50–90%
- **Red** >90%

Pie Chart (Category-wise Expenses)

Calculates total spending per category and displays it on a pie chart.

Bar Chart (Income vs Expense)

Displays monthly income and expenses for comparison.

Daily Financial Tip Generator

Randomly displays one budgeting tip each time the website loads.

Local Storage Support

All transactions, categories, and the budget limit are saved even after page refresh or browser close.

Short Explanation of code/modules:

transactions[] stores all income & expense objects.

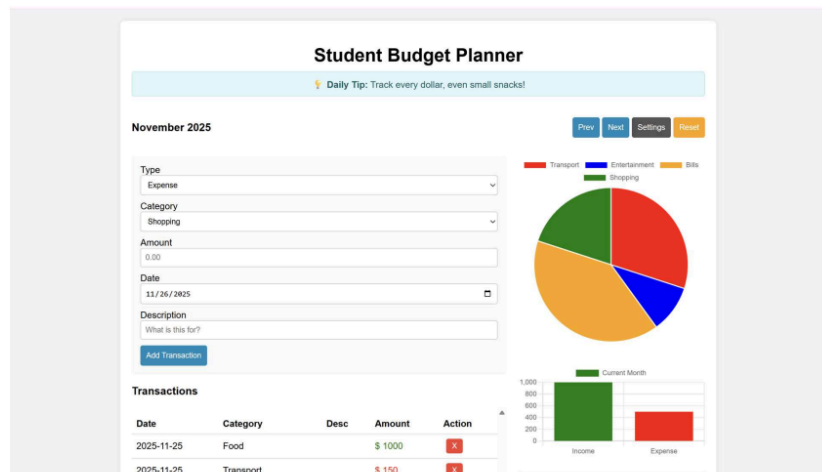

saveData() and **loadData()** manage browser localStorage.

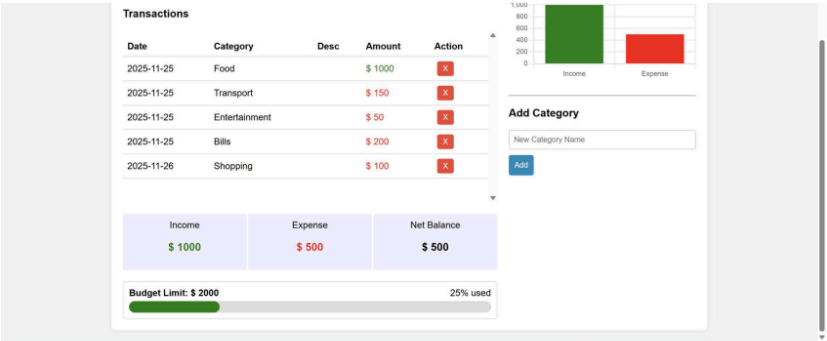

renderAll() recalculates totals and updates tables, bars, and charts.

drawPieChart(...) and **drawBarChart(...)** generate charts using Chart.js.

changeMonth() handles month navigation.

addTransaction() creates a new entry with a unique ID.
